Issued at 05:00 AM, 23 July 2027 | Thursday

Valid for broadcast until the next bulletin at 11:00 AM today.

TROPICAL CYCLONE WIND SIGNALS (TCWS) IN EFFECT

No Wind Signal hoisted at this time

HAZARDS AFFECTING LAND AREAS

Heavy Rainfall Outlook

EREL will not bring any significant rainfall in the country as of this time.

Severe Winds

No Tropical Cyclone Winds Signals are currently hoisted at this time

HAZARDS AFFECTING COASTAL WATERS

EREL is not affecting any coastal waters as of this time.

TRACK AND INTENSITY OUTLOOK

- Tropical Depression outside entered CAR and named EREL and maintained its strength. The circulation is still located in the highly favorable environmental condition of the Colorful Sea thus intensification is likely in the coming hours. The system will maintain its movement.
- The said weather system is not expected to affect any portions of the country by today until Friday due to the proximity of its rainbands circulation to the landmass. The tropical cyclone movement continues to undergo constant shifting thus changes in its track is likely. EREL is expected to remain a Tropical Depression from today through Saturday morning. Once it reaches Sandy Strait, it is forecast to intensify into Tropical Storm. The chance of landfall over the south-eastern vicinity of Cool Region is slimming but still not ruled out due to the possibility of the inwards western movement of the cyclone.
- The storm may pull the southwest monsoon given to the nature of the area where the system is expected to intensify and considering its forecast track and movement. There is a likelihood also of wind signals to be raised over the portins of Cool Region by Friday while this storm is at its closest to the vicinity of the said area.
